

a Leakage-resistant task-stream protocol

No evaluation weight enters basis training

b Task-weighted optimality and audit

$$M = \mathbb{E}[ww^T] = LL^T, \quad P_r = Q_r Q_r^T$$

$$\begin{aligned} \mathbb{E} \|(I - P_r) \nabla C_w\|_2^2 \\ = \|(I - P_r) J^T L\|_F^2 \end{aligned}$$

Top left singular vectors of $J^T L$ minimize expected discarded local gradient energy.

Development gate: FAILED

Exact gated deficit: -1.57 +/- 1.04 points (2 s.e.)

Finite-shot per-task signal: +0.61 +/- 1.57 points

The second result is inconclusive and simulator-assisted.
